## Safe communication in critical operations with stashcat® on Hytera's Multi-mode radios will be presented at PMRExpo 2019

*stashcat GmbH will be a guest at this year's PMRExpo from 26th to 28th November in Cologne at the booth of cooperation partner Hytera. "By working together with Hytera, we are combining the best of both worlds: Professional mobile radios paired with functional messaging. Due to Hytera's years of experience in the field of radio systems, we decided to integrate our messenger solution into the Multi-mode radios," explains Christopher Bick, CEO of stashcat GmbH.*

**Established solution:** The high secure messenger made in Germany has been made available free of charge for up to 10 users this year. The secure WhatsApp alternative is already an integral part of corporate, operational and planning communications for police forces in Lower Saxony and Hesse, as well as numerous other companies and authorities.

Guaranteed data sovereignty, the possibility to send people descriptions by photo, the direct communication in large operations via channel or the simple, very precise transmission of locations are only a few of the advantages which are used by the police of Lower Saxony with great enthusiasm. stashcat® has proven itself as a secure basic technology here, fulfills all given legal and content-related requirements for data protection and data security.

"The Hytera LTE Multi-mode radios combined with the stashcat messenger are the perfect package for practical use. This enables us to respond to the real needs of security organizations, large industrial and utility companies and public transport companies in particular," says Marvin Gradtko, Sales Manager at Hytera Mobilfunk.

**About the technology:** "stashcat has been on the market since 2013. In the first few years, we successfully placed the messenger in the educational market. We have been equipping police authorities since 2016. stashcat combines messaging and file storage with each other - as easily as WhatsApp and co. But with significantly more security and many more functions. Because stashcat is end-to-end encrypted and can be operated on customer systems, for example integrated into a police network. Our customers want to communicate with each other quickly and securely, which is why we develop stashcat exclusively in-house in Germany to ensure a high standard. [...]" - Christopher Bick, CEO stashcat GmbH.

**All information and the free online registration can be found at [www.stashcat.com/en](http://www.stashcat.com/en). Visit us from 26th to 28th November at the PMRExpo in Cologne in Hall 10 Stand B02.**

### **About stashcat GmbH**

stashcat GmbH is the market leader for highsecure messaging. It is addressed to corporations as well as public authorities and covers the need for confidential communication and data exchange. Thereby, our solution combines the functionalities of well-known messengers and cloud applications, for instance WhatsApp and Dropbox. Hosted in our German datacentre in accordance with the Federal Data Protection Act (Germany) or alternatively on premise. stashcat® has further features such as a mobile number independent contact database with LDAP interface, a real end-to-end encryption and georeferencing. All portable and static terminals (PC, MAC, Notebook) are supported. Furthermore, stashcat® can also be operated and branded as an own app.
